# OCEANOGRAPHIC OBSERVATIONS ON THE "E. W. SCRIPPS" CRUISES OF 1941

## CRUISES XVII-XXXIII

By  
H. U. SVERDRUP and STAFF

In 1941 ten cruises, numbered XVII to XXXIII, were made in coöperation with the U. S. Fish and Wildlife Service to study hydrographic conditions and the distribution of sardine eggs and larvae off southern California. The area investigated in 1940 (see fig. 1) was again selected for 1941; the stations were close enough together to be occupied within a period of about a week, thus yielding a nearly simultaneous picture of distributions for each cruise. As before, cruises were repeated at intervals of about three weeks in order to obtain a succession of distribution schemes, showing the changes with respect to time. Most of the 54 stations (see fig. 1) were occupied on each cruise. The first cruise began on March 21 and the last ended on November 22.

The hydrographic observations were made approximately at the 1940 standard depths: 0, 10, 20, 30, 40, 50, 75, 100, 150, 200, 250, 300, 400, 500, and 600 meters. With the aid of observations of the wire angle and unprotected thermometer, readings of the actual depths of the observations were determined. The observations of temperature, salinity, and oxygen content reported in table 1 were corrected to the accompanying standard depths by interpolation. The table also contains computed values of  $c_t$ , anomalies of specific volume and dynamic depth.

Observations of plankton diatoms are listed in table 2. Five-liter water samples obtained from different depths, 0, 10, 20, 30, 40, 50, 60 meters, by means of the Allen closing-bottle, were filtered through a small net no. 25 bolting silk, and the concentrated sample preserved in a small glass bottle for microscopic examination in the laboratory. The table contains the number of diatoms per liter in good condition, in poor condition, and the total number as well as the percentage of diatoms in poor condition.

## CHARTS

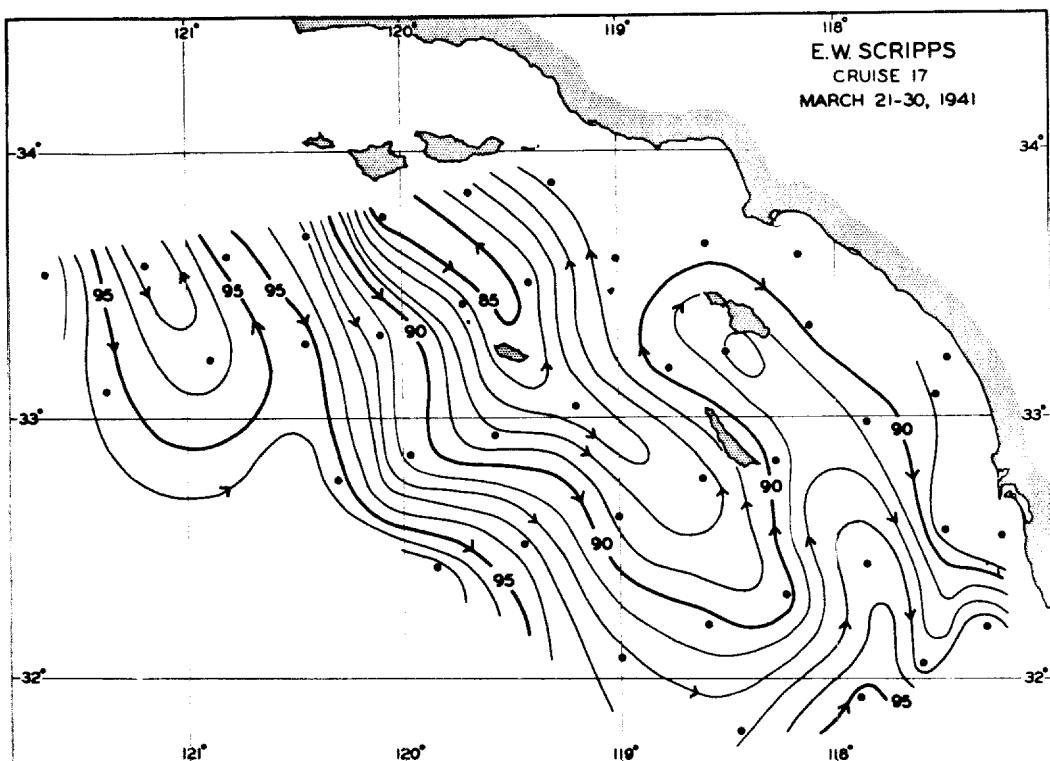

Chart 1.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XVII.

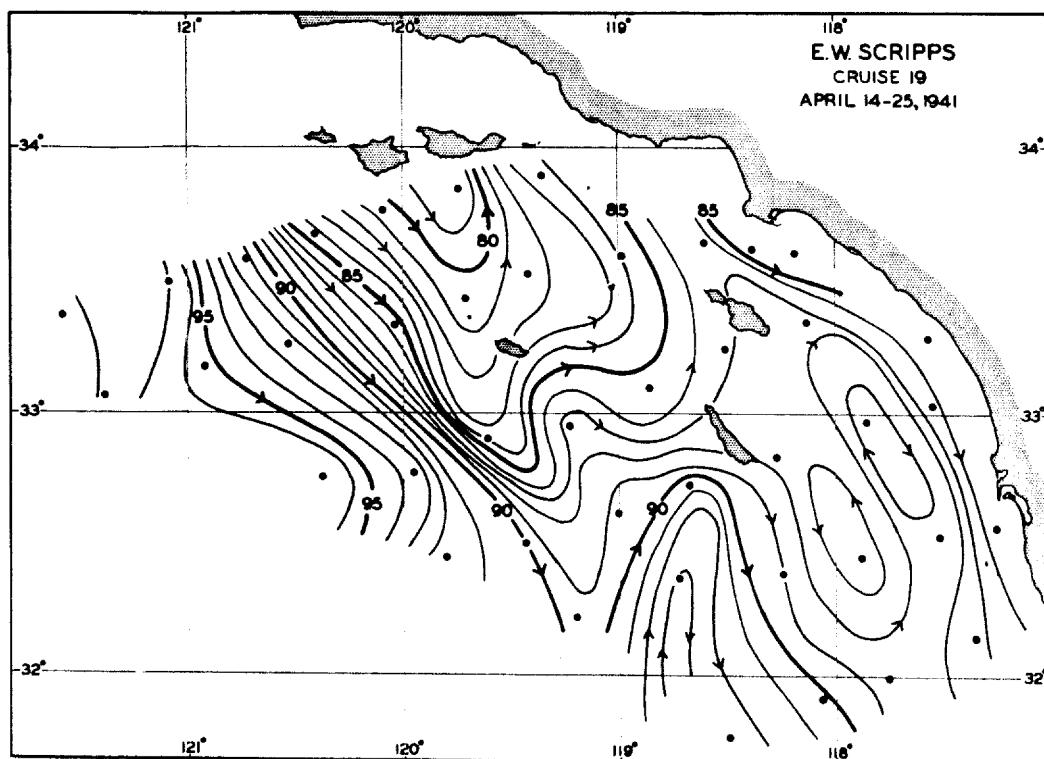

Chart 2.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XIX.

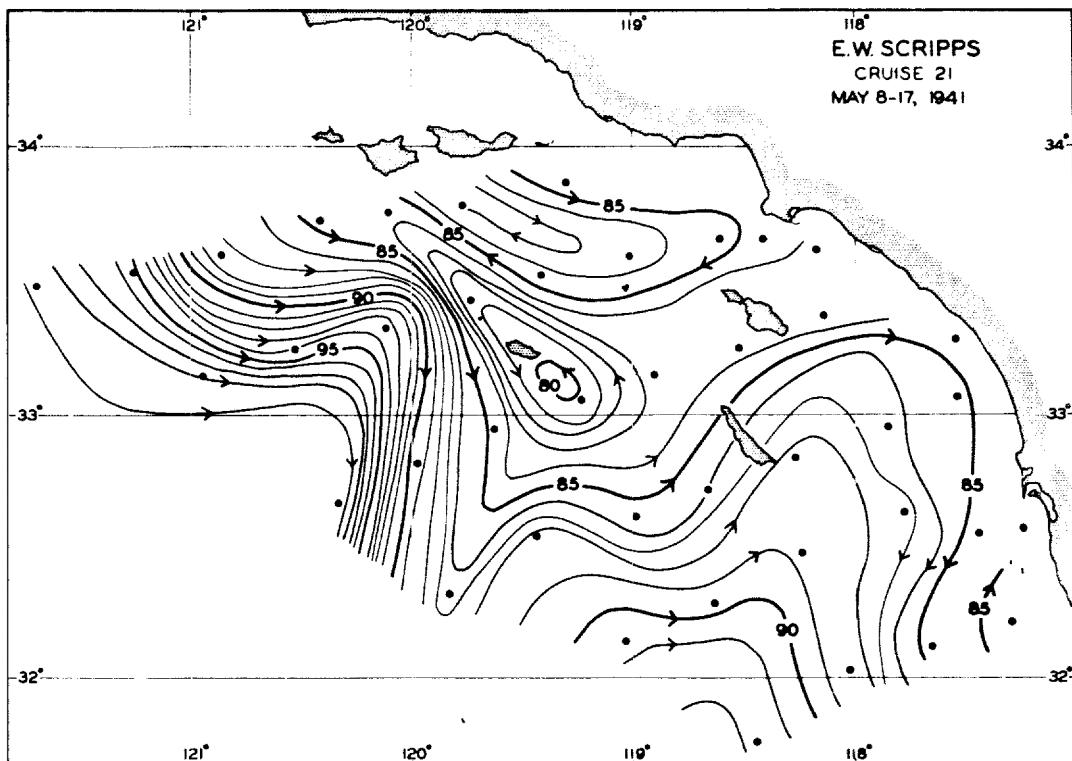

Chart 3.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XXI.

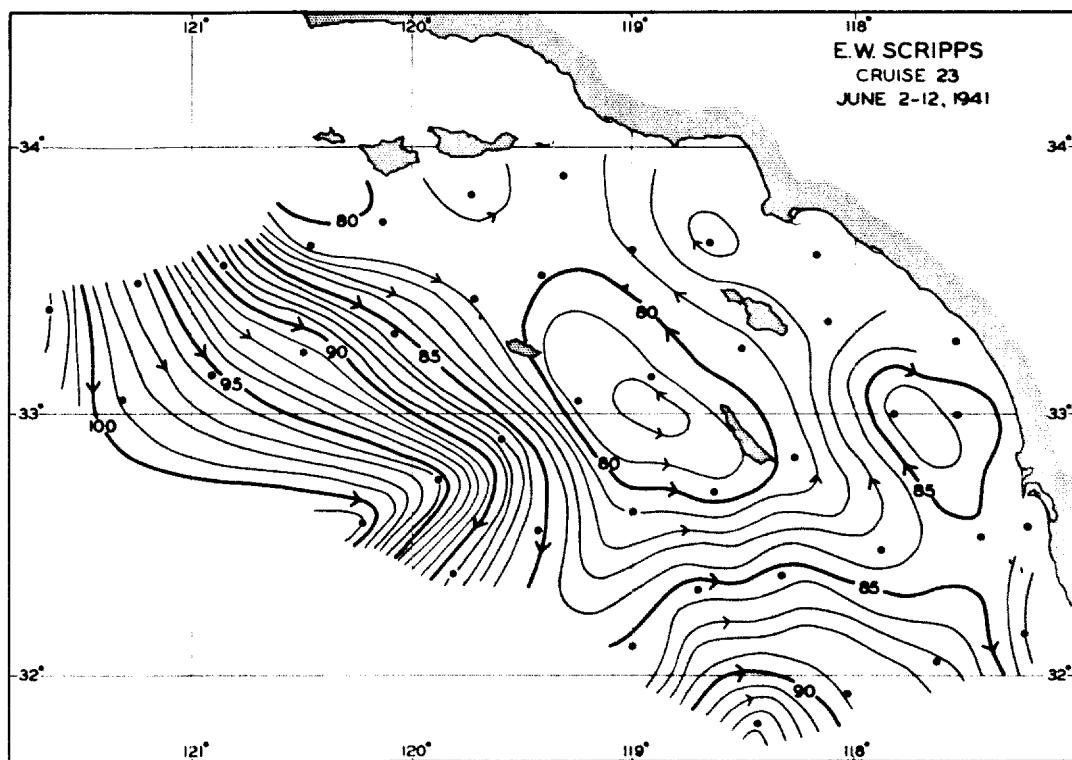

Chart 4.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XXIII.

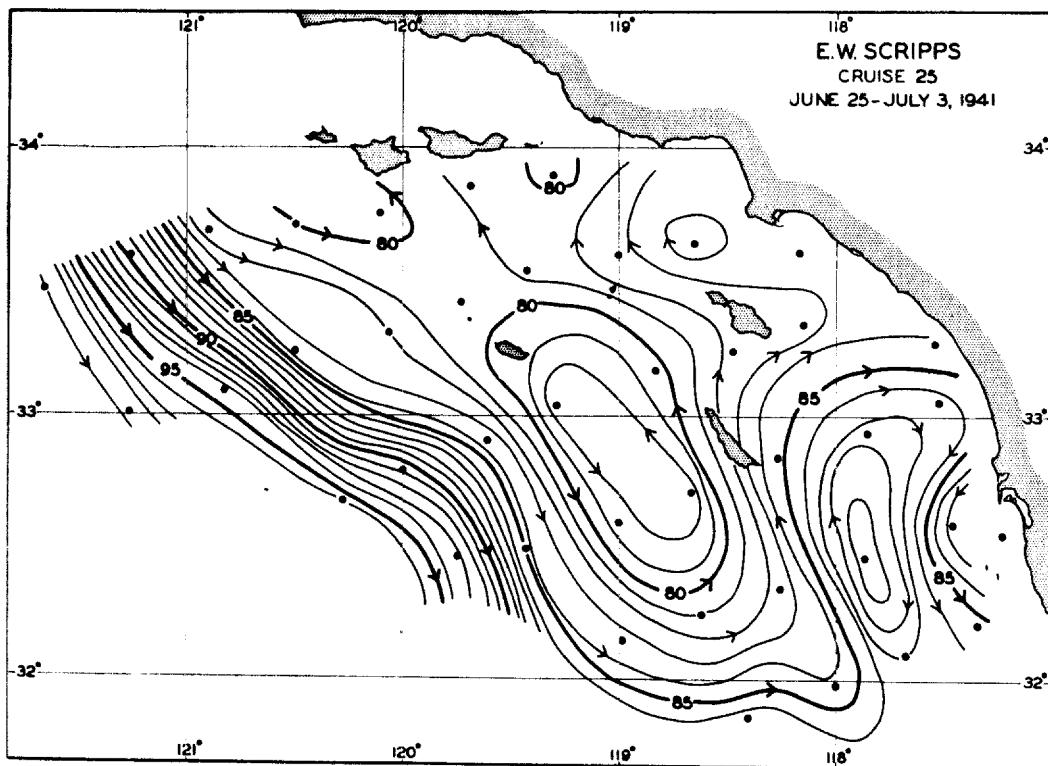

Chart 5.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XXV.

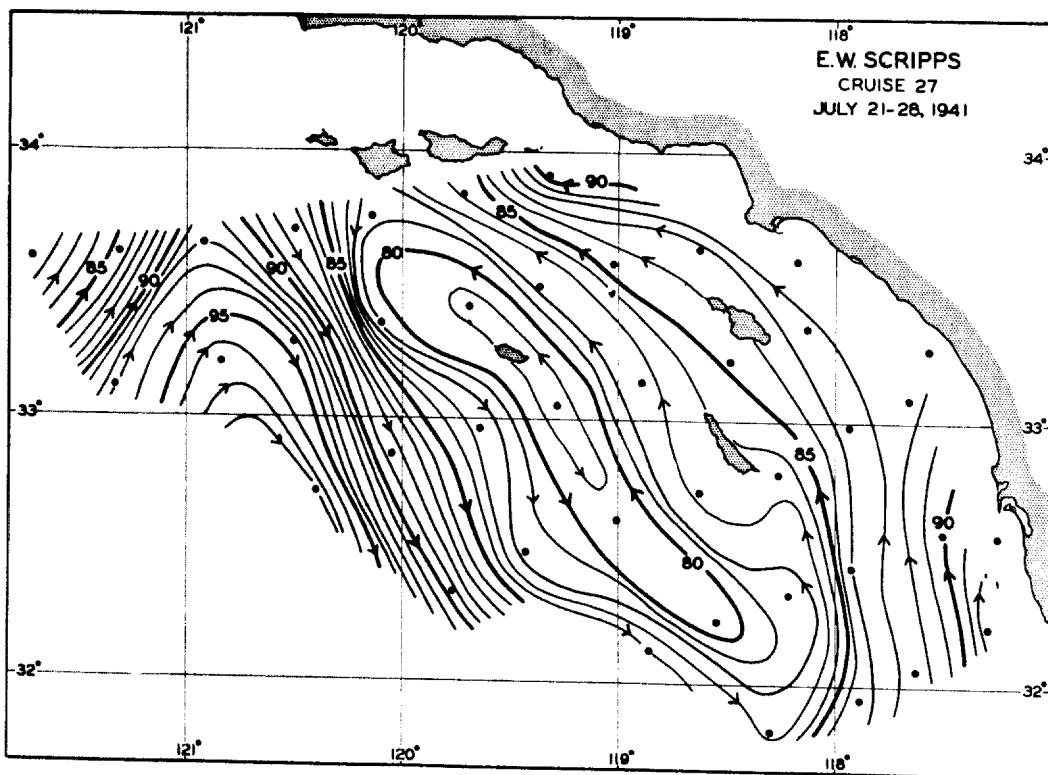

Chart 6.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XXVII.

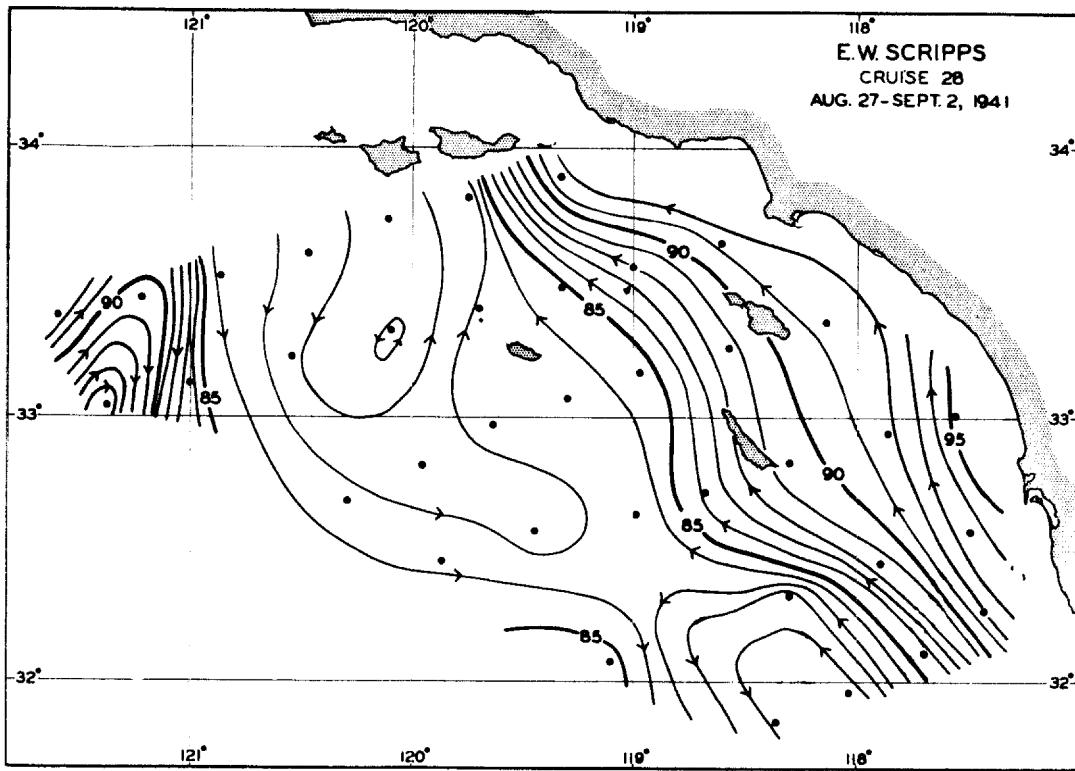

Chart 7.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XXVIII.

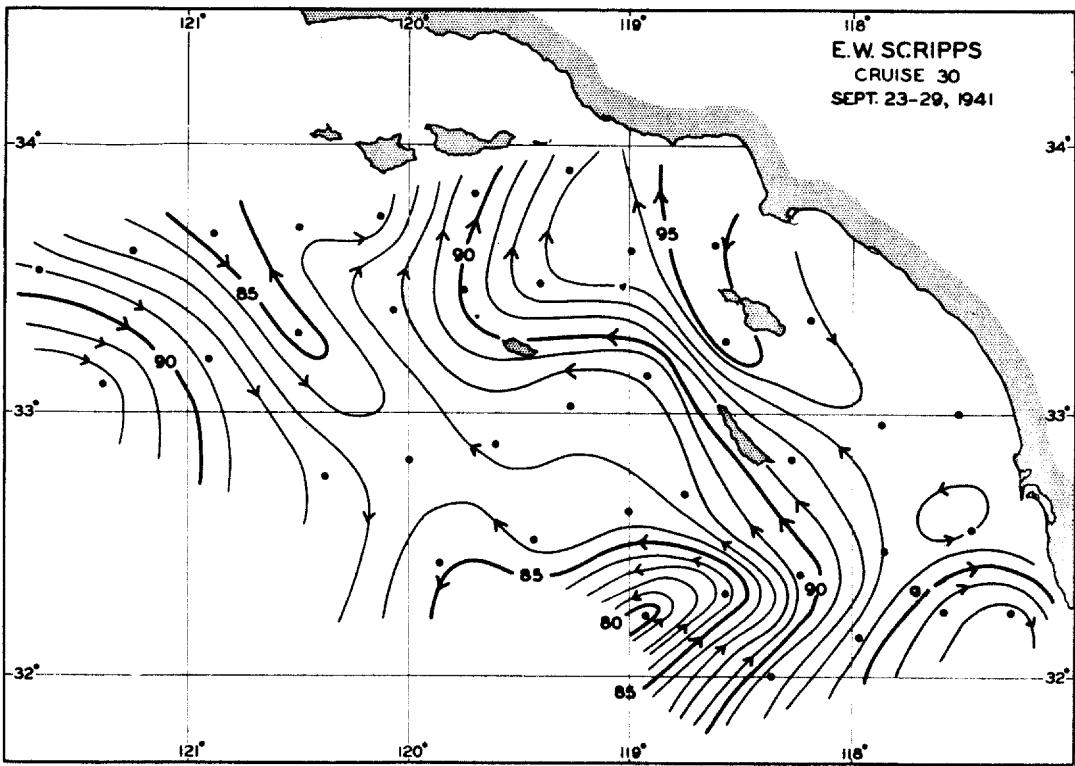

Chart 8.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XXX.

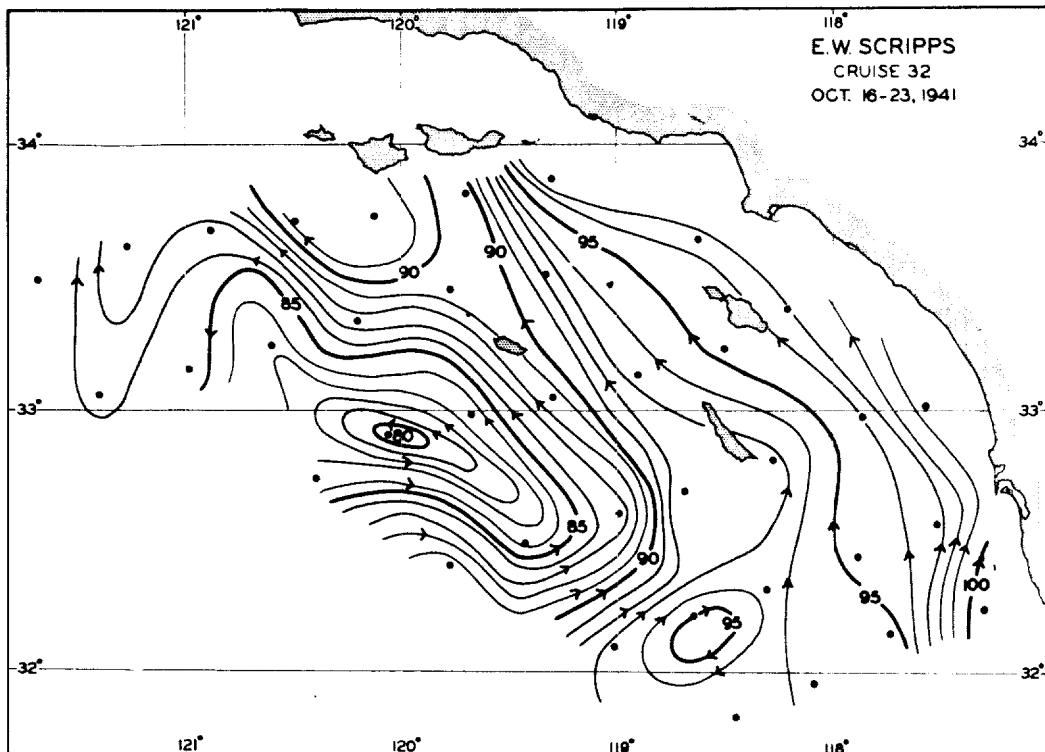

Chart 9.--Topography of the sea surface (dyn cm) relative to the 500 decibar surface.  
Cruise XXXII.
