1 Introduction

This report describes the processing of raw data acquired by position sensors on board RV Polarstern during expedition PS93.1 to receive a validated master track which is used as reference of further expedition data.

2 Workflow

The different steps of processing and validation are visualized in figure 1. Unvalidated data of up to three sensors and ship-motion data are extracted from the DAVIS SHIP data base (<https://dship.awi.de>) in a 1-second interval. They are converted to ESRI point shapefiles and imported to ArcGIS. A visual screening is performed to evaluate data quality and remove outliers manually. The position data from each position sensor are centered to the destined master track origin by applying ship-motion data (angles of roll, pitch and heading) and lever arms. For all three resulting position tracks, a quality check is performed using a ship's speed filter and an acceleration filter. Filtered positions are flagged. In addition, a manual check is performed to flag obvious outliers. Those position tracks are combined to a single master track depending on a sensor priority list (by accuracy, reliability) and availability / applied exclusion of automatically or manually flagged of data. Missing data up to a time span of 60 seconds are linearly interpolated. To reduce the amount of points for overview maps the master track is generalized by using the Ramer-Douglas-Peucker algorithm. This algorithm returns only the most significant points from the track. Full master track and generalized master track are written to text files and imported to PANGAEA (<http://www.pangaea.de>) for publication.

Figure 1: Workflow of master track data processing

3 Sensor Layout

This chapter describes the position sensors mounted during this cruise.

Cruise details

Vessel name	RV Polarstern
Cruise name	PS93.1
Cruise start	29.06.2015 Longyearbyen
Cruise end	18.07.2015 Tromsø
Cruise duration	20 days
Master track reference point:	Resulting master track is referenced to <i>MINS installation point</i> .

Position sensors

Sensor name	Raytheon Anschuetz MINS2 , short: MINS
Description	Marine inertial navigation system with reference positions from Trimble DGPS
Accuracy	< 60 m CEP50 (with SPS GPS)
Installation point	Gravimeter room on F-Deck, close to COG
Installation offset	Offset from master track reference point to sensor installation point X Positive to bow 0.000 m Y Positive to starboard 0.000 m Z Positive upwards 0.000 m

Sensor name	Trimble Marine SPS461 (1) , short: Trimble 1
Description	DGPS-Receiver, correction type DGPS RTCM 2.x, correction source DGPS Base via radio
Accuracy	Horizontal: ± 0.25 m + 1 ppm & Vertical: ± 0.50 m + 1 ppm
Installation point	Observation deck (starboard)
Installation offset	Offset from master track reference point to sensor installation point X Positive to bow 22.777 m Y Positive to starboard -5.460 m Z Positive upwards 21.525 m

Sensor name	Trimble Marine SPS461 (2) , short: Trimble 2
Description	DGPS-Receiver, correction type DGPS RTCM 2.x, correction source DGPS Base via radio
Accuracy	Horizontal: ± 0.25 m + 1 ppm & Vertical: ± 0.50 m + 1 ppm
Installation point	Observation deck (port)
Installation offset	Offset from master track reference point to sensor installation point X Positive to bow 16.527 m Y Positive to starboard 12.408 m Z Positive upwards 21.538 m

Motion sensor

Sensor name	Raytheon Anschuetz MINS2 , short: MINS
Description	Marine inertial navigation system with reference positions from Trimble DGPS
Accuracy	$\pm 0.02^\circ$ roll, $\pm 0.02^\circ$ pitch, $\pm 0.05^\circ$ heading
Installation point	Gravimeter room on F-Deck, close to COG

4 Processing Report

Database Extraction

Data source	DSHIP database (dship.awi.de)
Exported values	1728000
First dataset	2015-06-29T00:00:00 UTC
Last dataset	2015-07-18T23:59:59 UTC

Centering & Motion Compensation

Each position track has been centered to the *MINS installation point* by applying the correspondent motion angles for heading, roll and pitch as well as the installation offsets from chapter 2. The motion data were acquired by Raytheon Anschuetz MINS2.

Automatic Validation

The following thresholds were applied for the automatic flagging of the position data:

Speed	Maximum 20 kn between two datapoints.
Acceleration	Maximum 1 m/s^2 between two datapoints.
Change of course	Maximum 5° between two datapoints.

Manual Validation

Obvious outliers were removed manually. For details see Processing Logbook of RV Polarstern (hdl:10013/epic.45909).

Flagging result

	MINS		Trimble 1		Trimble 2	
Missing	634	0.037%	0	0.000%	1687899	97.679%
Speed	933	0.054%	4	0.000%	812	0.047%
Acceleration	2261	0.131%	355	0.021%	829	0.048%
Course	341750	19.777%	376945	21.814%	13831	0.800%
Manually	0	0.000%	0	0.000%	73	0.004%

Master Track Generation

The master track is derived from the position sensors' data selected by priority.

Sensor priority used:

1. Trimble 1
2. MINS
3. Trimble 2

Filters applied: manual, speed, acceleration.

Distribution of position sensor data in master track:

Sensor	Data points	Percentage
Total	1728000	100.000 %
MINS	350	0.020 %
Trimble 1	1727644	99.979 %
Trimble 2	0	0.000 %
Interpolated	6	0.000 %
Gaps	0	0.000 %

Remarks

Trimble 2 missing during nearly entire cruise.

Score

For each cruise, a score is calculated ranging from 0 (no data) to 100 (only very good data). the score for the cruise PS93.1 is 83.

Generalization

The master track is generalized to receive a reduced set of the most significant positions of the track using the Ramer-Douglas-Peucker algorithm and allow a maximum tolerated distance between points and generalized line of 4 arcseconds.

Results:

Number of generalized points	2119 points
Data reduction	99.8774 %

Result files

Report in XML format:

The XML contains all information of the master track generation in a machine-readable format. In addition a XSD schema file is provided.

Master track text file:

The format is a plain text (tab-delimited values) file with one data row in 1 second interval.

Column separator	Tabulator "\t"	
Column 1	Date and time expressed according to ISO 8601	
Column 3	Latitude in decimal format, unit degree	
Column 4	Longitude in decimal format, unit degree	
Column 5	Flag for data source	
	1	MINS
	2	Trimble 1
	3	Trimble 2
	INTERP	Interpolated point
	GAP	Missing data

Text file of the generalized master track:

The format is a plain text (tab-delimited values) file.

Column separator	Tabulator "\t"
Column 1	Date and time expressed according to ISO 8601
Column 2	Latitude in decimal format, unit degree
Column 3	Longitude in decimal format, unit degree
