

Theta 1-57S

Latitude:	29°22N	Longitude:	57°23W
Corr. depth:		PDR depth:	3073 fm
Date taken:	23 Sept 1956	Date opened:	19 July 1971
Date described:	22 July 1971	Date photographed:	19 July 1971
Described by:	R. Baker	Station number:	C-58
Core length:	47 cm	Flow-in:	

0-47 cm (CLAY), pale yellowish brown (10YR6/2), secondary selenite crystals growing on the surface, dry and hard. Carbonate content very low. Coarse fraction less than 5%, consisting of abundant manganese micronodules, occasional planktonic and benthonic foraminifera, secondary calcite crystals, sub angular to rounded, clear quartz grains and rare sponge spicules.
