1 Introduction

This report describes the processing of raw data acquired by the thermosalinograph on board RV "Heincke" during expedition HE388 to receive cleaned up and drift corrected salinity data.

2 Workflow

The different steps of processing are visualized in Figure 2. Unvalidated data of sensor, internal and external temperature are extracted from the DAVIS SHIP data base (https://dship.awi.de) in a 1-second interval for cruises from 2009 to 2014. The Salinity was calculated by applying the Practical Salinity Scale 1978 (PSS-78). Furthermore the sound velocity was derived by using the Del Grosso equation.

As first step, a basic cleanup was performed to remove missing or flagged data. Since the salinity measurements in coastal areas (e.g. rivers and ports) are less reliable, measurements in a buffer of 2 nautical miles (NM)along the coast are filtered. In the norwegian area (fjords) the buffer is set to 200 meters (0.108 NM). After the exclusion of data outside the speed interval of 0.5 kn to 15 kn, the salinity is driftcorrected with lab calibration data. In the next processing step the difference between the external and internal temperature is taken to identify an unproper usage of the thermosalinograph. This filter is ignored if more than 90% of the data would get removed. After despiking, a visual screening is performed to enhance the data quality. In the last step the temporal resolution is reduced to 5-minutes-means.

3 Cruise details

Vessel name   RV "Heincke"

Cruise name   HE388

Cruise start   19.09.2012 Bremerhaven

Cruise end   05.10.2012 Bremerhaven

Cruise duration   16 days

4 Sensor

Thermosalinograph: Seabird SEACAT SBE21 (SN: 3334)
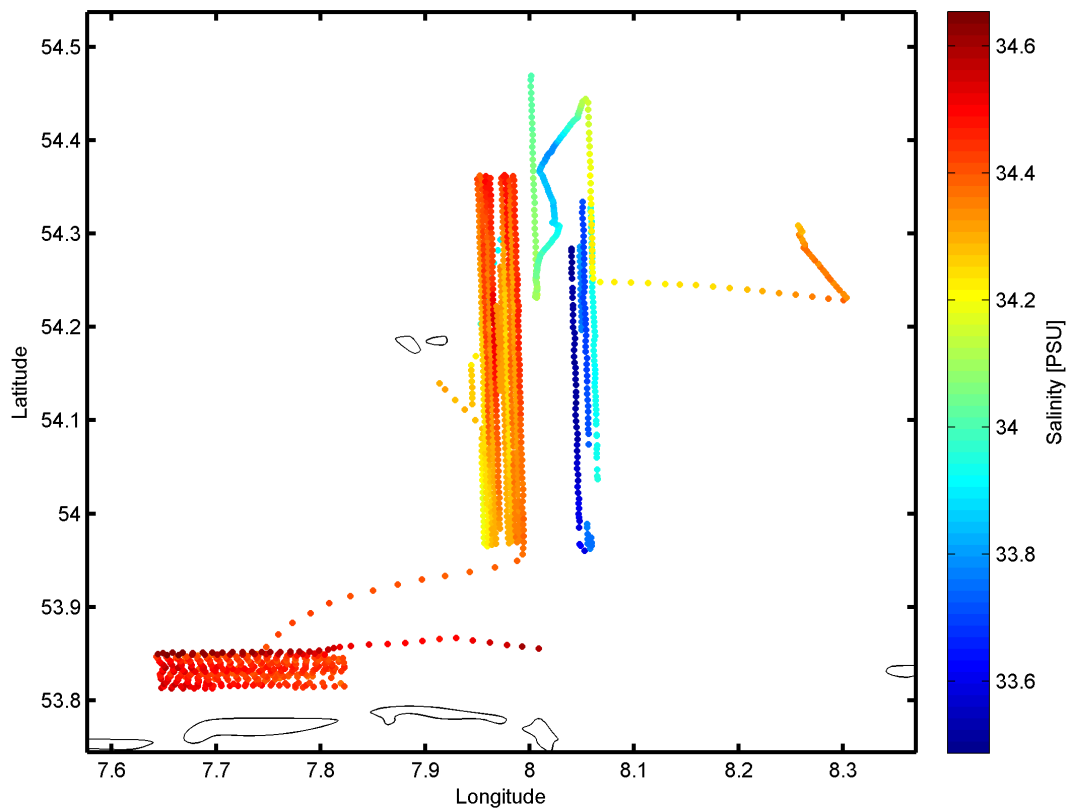

External Temperature: SBE38

Figure 2: Cruisemap of HE388.

5 Processing Report

Database Extraction

Data source	DSHIP database (dship.awi.de)
Exported values	1468801
First dataset	2012-09-19T00:00:03 UTC
Last dataset	2012-10-06T00:00:00 UTC

Automatic Validation

The following thresholds were applied for the automatic flagging of the position data:

Min. speed	Minimum 0.5 kn between two datapoints.
Max. speed	Maximum 15 kn between two datapoints.
GeoBuffer	0.1080 NM around Norway, 2 NM anywhere else
Temperature	Maximum T-difference of 5 K.

Flagging result

Filter	Data left (abs.)	Data left (rel.)	Data removed (abs.)	Data removed (rel.)
Raw data	1468801	100 %	—	—
Basic	1465127	99.75 %	3674	0.25 %
Geo	1326829	90.33 %	141972	9.67 %
Speed	1290413	87.85 %	178388	12.15 %
Temperature	405472	27.61 %	1063329	72.39 %
Despike	373978	25.46 %	1094823	74.54 %
Manual	373670	25.44 %	1095131	74.56 %
5-min-Mean	1435	0.10 %	1467366	99.90 %

Sensordrift

|	
Last calibration	20.12.2008
Current calibration	12.01.2013
Start of deployment	02.05.2011
End of deployment	11.12.2012
Scaled drift	-1.9400e-002 [PSU/month]
Minimal offset	3.2292e-001 [PSU]
Maximal offset	3.3303e-001 [PSU]

Result file

<u>Text File (HE388_surf_oce.tab):</u>

The format is a plain text (tab-delimited values) file.

Column separator	Tabulator "\t"
Column 1	Date and time expressed according to ISO 8601
Column 3	Latitude in decimal format, unit degree
Column 4	Longitude in decimal format, unit degree
Column 5	Depth below water surface, unit meter
Column 6	Temperature, unit degree
Column 7	Salinity, unit PSU
